

AT THE END OF TRAINING THE CLINICIAN SHOULD BE ABLE TO:

- Describe the general operation and structure of the BeneVision Distributed Monitoring System
- Explain how to assign a device, move the device, switch between devices, as determined by the facility
- Discuss main screen, bed layouts and options
- Discuss admitting a patient and entering patient demographic information
- Explain remote control functions and password protection as determined by the facility
- Identify alarm behavior and differentiate between alarm reset and alarm pause
- Identify departmental parameter and alarm settings.
- Explain how to adjust patient specific alarms
- Outline the arrhythmia analysis process and describe basic troubleshooting techniques
- View and print current and historical patient data
- Discuss patient data transfer options within and between departments
- Discharge a device and differentiate between standby, clear overview bed and discharge
- Discuss viewing and printing a discharged patient's data
- Explain how to retrieve a discharged patient
- Describe assigning/removing pagers and activating the patient on alarm function as determined by the facility
